Preface

Dear distinguished guests, ladies and gentlemen:

On the opening of 2015 4th International Conference on Computer Science and Network Technology (ICCSNT 2015), I would like to extend my warm welcome and deep gratitude to all of you here.

This conference is organized by Heilongjiang University. We wish to appreciate the co-sponsors: Dalian Jiaotong University, Northeast Normal University and Shaanxi Normal University and IEEE Harbin Section as the technical co-sponsor.

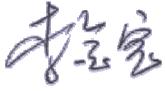

ICCSNT2015 is the forth forum for the presentation of new advances and research results in a wide variety of scientific areas with a common interest in improving Future Computer Science, Network Technology and Communication related techniques.

Altogether over 407 papers are submitted. We received the papers from Tsinghua University, Zhejiang University, Harbin Institute of Technology, Tongji University, Beijing University of Posts and Telecommunications, Shanghai Jiaotong University, Beijing University of Aeronautics and Astronautics as well as universities from abroad like Australia, USA, Russia, India, Bangladesh, etc in which 353 papers are accepted. The paper quality and English level compared with that of last year have improved greatly. As the annual conference series, the conference has now become an important event in the calendar, judged by the number of papers we received this year.

Harbin, the northern most provincial capital of China, situated at the center of northeast Asia, has always been the prime city of trade with Russia. It is best known for its appealing winter landscape, stimulating winter sports and various dazzling ice and snow art works, such as ice lanterns, snow sculptures and ice carvings, hope you will enjoy this trip.

I am confident that this conference will be successful. And I wish

all of you will get benefit from this event. Thank you!

Plenary Speeches

Plenary Speech I: Authentication of Spatial Queries in Both Vector Spaces and Spatial Networks

Session Chair: Jinbao Li

Biography:

Wei-Shinn (Jeff) Ku received his Ph.D. degree in computer science from the University of Southern California (USC) in 2007. He also obtained both the M.S. degree in computer science and the M.S. degree in electrical engineering from USC in 2003 and 2006, respectively. Wei-Shinn Ku is an associate professor of the Department of Computer Science and Software Engineering at Auburn University, USA. His research interests include data management systems, big data analytics, geographic information systems, and mobile computing. He has published more than 80 research papers in refereed international journals and conference proceedings. He is a senior member of the IEEE.

Abstract:

With the popularity of location-based services and the abundant usage of smart phones and GPS-enabled devices, the necessity of outsourcing spatial data has grown rapidly over the past few years. Meanwhile, the fast arising trend of Cloud storage and Cloud computing services has provided a flexible and cost-effective platform for hosting data from businesses and individuals, further enabling many location-based applications. Nevertheless, in this database outsourcing paradigm, the authentication of the query results at the client remains a challenging problem. In this talk, I will focus on the Outsourced Spatial Database (OSDB) model and introduce an efficient scheme, called VN-Auth, which allows a client to verify the correctness and completeness of the result set in both vector spaces and spatial networks. The approach is based on neighborhood information derived from the Voronoi diagram

of the underlying spatial dataset and can handle fundamental spatial query types, such as k nearest neighbor and range queries, as well as more advanced query types like reverse k nearest neighbor, aggregate nearest neighbor, and spatial skyline. We evaluated VN-Auth based on real-world datasets using mobile devices (Google Droid smart phones with Android OS) as query clients. Compared to the current state-of-the-art approaches (i.e., methods based on Merkle hash trees), our experiments show that VN-Auth produces significantly smaller verification objects and is more computationally efficient.

Plenary Speech II: Trust Assessment in Online Social Networks

Session Chair: Yan Yang

Biography:

Qing Yang, Ph.D, is a RightNow Technologies Assistant Professor in the Department of Computer Science at Montana State University. He received B.S. and M.S. degrees in Computer Science from Nankai University and Harbin Institute of Technology, China, in 2003 and 2005, respectively. He received his Ph.D degree in Computer Science from Auburn University in 2011. His

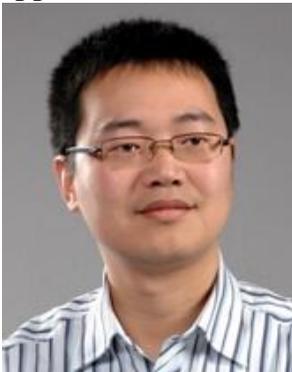

research interests include Online Social Network, Trust Management, Vehicular Network, and Wireless Sensor Networks (WSNs). He has published papers in prestigious journals such as IEEE Transactions on Dependable and Secure Computing, IEEE Network Magazine and IEEE Communications Magazine, in prestigious conferences such as IEEE INFOCOM, CNS and SECON.

Abstract:

Assessing trust in online social networks (OSNs) is critical for many social network applications such as online marketing but challenging due to the difficulties of handling complex OSNs topology, in existing models such as subjective logic, and the lack of effective validation

methods. To address these challenges, we for the first time properly define trust propagation and combination in arbitrary OSN topologies by proposing 3VSL (Three-Valued Subjective Logic). The 3VSL distinguishes the posteriori and priori uncertainties existing in trust, and the difference between distorting and original opinions, thus be able to compute multi-hop trusts in arbitrary graphs. We theoretically proved the capability based on the Dirichlet distribution. Furthermore, an online survey system is implemented to collect interpersonal trust data and validate the correctness and accuracy of 3VSL in real world. Both experimental and numerical results show that 3VSL is accurate in computing interpersonal trust in OSNs.

Plenary Speech III: Crowdsensing for smart cities: challenges and opportunities

Session Chair: Longjiang Guo

Biography:

Yanmin Zhu is a professor in the Department of Computer Science and Engineering at Shanghai Jiao Tong University since 2009. Prior to joining Shanghai Jiao Tong University, he was a Research Associate with the Department of Computing at the Imperial College London. He received his PhD from the Department of Computer Science and Engineering at the Hong Kong University of Science and Technology (HKUST) in July 2007; and his bachelor from Xi'an Jiao Tong University (XJTU) in July 2002. His research interests include wireless sensor networks, vehicular ad hoc networks, Internet of things (IoT), crowd sensing and smartphone sensing. He severed TPC Co-Chairs of a few international conference, including IEEE ICPADS 2014, COLLABORATECOM 2015, etc.

Abstract:

With the rapid development of smart mobile devices and mobile Internet, crowd sensing has become increasingly popular in recent years as a new paradigm for gathering various sensing data from people's surroundings. The main advantages of crowd sensing, in contrast to traditional sensor networks, include lower deployment and maintenance cost, wider geographical coverage, richer sensing data, etc. Crowd sensing is particularly instrumental to various applications of smart cities. This talk first introduces the basics of crowd sensing, highlighting the main components of a crowd sensing system and the typical process of employing crowd sensing for building an application of smart cities. Then, the talk discusses the key challenges facing crowd sensing, e.g., strategic behaviors of data contributors, and sparseness of sensing data. Finally, the talk will present some of our recent research projects of crowd sensing, including incentive mechanisms, state estimate with sparse data, and map updating with GPS trajectories.
